**RUTHERFORD CONTROLS INT'L CORP INTRODUCES ... DELAYED EGRESS MADE EASY!**

**Rutherford Controls Int'l Corp., January 2, 2009** - Delayed egress systems are perfectly suited in applications where loss prevention and traffic control are a concern but life safety must remain a priority. Traditionally, these systems can be complicated. Want to make it *easy*?

Rutherford Controls Intl Corp announces the New DE8310 Delayed Egress Electromagnetic Lock: affordable, flexible, intelligent and simple to use.

This all-in-one delayed egress system has a patented built-in "sensor" that detects pressure once applied to the outward swinging doors. This means that the DE8310 integrates with existing mechanical door hardware making this an *easy* delayed egress solution.

The DE8310 is available with built-in sounder, voice and CCTV monitoring combinations. The voice versions come with pre-recorded messages that provide exit instructions or in case of an attempted forced exit, a warning notifying security personnel. The built-in camera versions are compatible with motion activated or continuous recording DVR's.

The DE8310 comes standard with field selectable settings allowing the flexibility needed to meet a variety of building codes. The unit also holds a highly visible Red/Green light panel that clearly indicates the status of the door from a distance which is ideal for sight inspections down long corridors.

"We believe Installers looking for a delayed egress solution will be attracted to this product due to its *ease* of installation and the fact that it's a unique cost effective alternative they can offer their Customers", states Bob Lafrance V.P. of Sales & Marketing. "RCI is extremely excited about the launch of this new product and we feel that it strengthens our reputation as a solution provider for electrified door hardware in the marketplace".

Known today as RCI, Rutherford Controls Int'l Corp. has forged strategic global alliances and provides the architectural hardware, locksmith, and security markets with the best in electric locks, door hardware and access control products.
